(57)Abstract:

PURPOSE: To display auction information in a display part installed at every purchaser seat by generating auction information in an image by means of a data processing and synthesizing the image of a sample, etc., which is image-picked-up by means of a camera.

CONSTITUTION: A signal from an auction information input part 1 is processed into image data by a data processing part 2, synthesized with the image, etc., from the camera 3 by an auctioneer terminal equipment 4 and transmitted to the purchaser seat via a signal transmission network 9 and displayed on the screen 6 of the display part 6. A purchaser ID, etc., is registered by the operation of a purchaser terminal equipment 5. Thus, the signal inputted from the above purchaser terminal equipment is recorded in the area of ID a computer device 8 so as to be processed from now on. The purchaser inputs purchasing by the purchaser terminal equipment while viewing the sample image and the information image on the display screen. The data is processed in order of a purchasing input by the computer device and transmitted to the auctioneer terminal equipment so that a required selling/purchasing processing is executed.
